

# CHEMICAL INDICATOR STRIP For Monitoring Vaporized Hydrogen Peroxide Sterilization Processes (CLASS 4 / TYPE 4)

**Crosstex Code: GPS-250R** 

## **Product Image**

#### **Product Description**

Crosstex Chemical Indicator Strips, GPS-250R, are intended for use with individual units (e.g. packs, containers) to indicate that the unit has been directly exposed to a  $VH_2O_2$  process and to distinguish between processed and unprocessed units. The indicator color transitions from pink/red to blue.

### **Physical Properties**

Process	$VH_2O_2$
Indicator Strip Dimensions	101 mm x 16 mm (4" x 0.625")
Packaging	250 Strips/Box
Chemical Indicator	Initial Color : Pink/Red Signal Color : Blue

#### **Intended Use**

The indicators are intended to monitor all cycles within the STERRAD® 100S, 200, NX, 100NX, and STERIS® V-PRO® vaporized hydrogen peroxide sterilizers. The VH<sub>2</sub>O<sub>2</sub> Indicators are intended to be used with sterilization wraps, containers, cassettes, rails or pouches to distinguish between processed and unprocessed units for both Healthcare and Industrial applications.

Class 4/Type 4 Multi-critical Process Variable Indicator Stated Value:

• 2.3 mg/L  $\pm$  0.4 mg/L of VH<sub>2</sub>O<sub>2</sub> at 50°C for 6 minutes

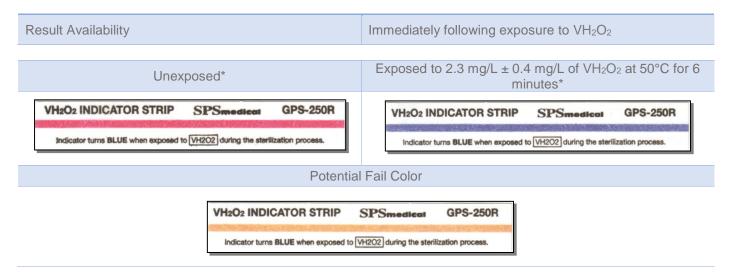

#### Instructions for Use

Use a strip in each pack, peel pouch, or tray to be VH<sub>2</sub>O<sub>2</sub> sterilized. Process packages/items as instructed in the sterilizer validation or manual.

Upon exposure to  $VH_2O_2$ , the chemical indicator will transition from pink/red to a shade of blue. The transition color may vary depending on the load configuration, length and conditions of exposure. A color transition from pink/red to a shade of blue provides indication of exposure to  $VH_2O_2$ . If signal color is not achieved, this suggests ideal sterilization conditions may not have been met. Colors other than blue such as yellow/green should be treated as a process failure. Determine if the load was successfully sterilized by examining the biological indicator, or re-sterilize the load using a new strip.

The endpoint color (blue) of the indicator will remain stable for a minimum of 45 days from the date of processing when stored according to the products labeled storage conditions.

#### **Performance Characteristics**

<sup>\*</sup>Colors shown are representations of printed ink initial and signal colors but may vary from actual use.

The signal color achieved from exposure to  $VH_2O_2$  may vary from the example above due to differences in processing parameters (i.e. load content, cycle time, temperature, etc.).

## Compliance

ISO 11140-1:2014 Sterilization of health care products – Chemical Indicators- Part 1: General Requirements for Type 1 Chemical Process Indicators & Type 4 Multi critical Process Variable Indicators

# Storage and Shelf Life

+15°C +30°C	15°C to 30°C	类	Keep away from light sources
<b>%</b> 70%	20% to 70% Relative Humidity	<del>**</del>	Keep dry
Shelf life	2 years from the date of manufacture  The date of manufacture is based on the day the indicating ink is applied to the substrate. The remaining shelf life upon receipt will be shorter than 2 years.		Do not reuse
$\triangle$	Keep away from sterilants, alkaline chemicals and acids. Do not use after expiration date. Do not use the product if the indicator has transitioned to a blue color prior to use.		

# Disposal

Discard as general waste.
